

January 27, 2012

Dear City Clerk's Staff,

The Residents Association Mount Pleasant (RAMP) is presenting the City of Vancouver Council with a petition opposing the rezoning proposal at 228 to 246 East Broadway and 180 Kingsway. As Council will be debating a motion to refer this item to Public Hearing on January 31, 2012 at a Regular Council meeting, we request that information about our petition and number of people who signed in opposition to the proposal be provided to Council and the City Manager prior to this meeting.

We have submitted today two thousand one hundred and sixteen signatures on the petition.

The personal information on this petition was given in confidence by members of the public for use on this petition. We therefore we ask that the full confidentiality of the individuals be protected. The information provided may only be used in the verification of the petition. I understand that in our previous conversations the City Clerk's office can maintain the confidentiality of the petition. The names, email addresses, phone numbers, addresses are not to be used for any other purpose than to verify the petition; the City of Vancouver is not to share this information with any third party or elector organization. Data-mining is expressly not permitted.

RAMP may provide additional signatures to this petition at a later date. If the petition is expanded, we ask that the same conditions be respected to protect the privacy of additional individuals who sign the petition.

Thank you very much for your cooperation.

Kind regards,

Grace MacKenzie

Director,

Residents Association Mount Pleasant

WE THE UNDERSIGNED ARE OPPOSED TO A REZONING PROPOSAL TO ALLOW AN EXCESSIVELY HIGH TOWER AT 180 KINGSWAY / 228 - 246 EAST BROADWAY BECAUSE:

- It does not preserve Mount Pleasant's historic character. It will destroy the human-scale feeling of the area.
- It sets a precedent that will lead to more high-rise projects of this magnitude in the neighbourhood.
- It creates loading bays on Watson Street that will negatively impact pedestrians and bikes.
- It would cast long shadows on buildings and the streets to the north. The open space within the project would be shadowed by the tall buildings.
- It does not respect the City's guidelines for C-3A.
 - Public and private views of the mountains would be lost.

WE REQUEST:

- That development be consistent with the current scale of the properties surrounding the "Heritage Heart" of Mount Pleasant.
- That Council consider an increase to the allowed height and density from 9.2 m (30 feet) to no more than 21.3 m (70 feet) with a high-low massing rhythm of up to a maximum 21.3 m (70 foot) tower surrounded by 2 to 4 storey buildings and an increase in the floor space ratio (FSR) from 1.00 to no more than 3.00.

BENEFITS:

- These recommendations respect the new Mount Pleasant Community Plan to increase height and density while maintaining the look and feel of the area and keeping the human-friendly scale of the buildings surrounding the Heritage Heart of our community.
- If the developer chose wood frame construction it would decrease the cost to build and thereby promote affordability. Wood frame construction is also better for the environment than concrete and glass towers.
- The form of development we are advocating will have less impact on land values, property taxes and rents in the neighbourhood, resulting in less displacement of low-income residents and small businesses.

Residents Association Mount Pleasant

WE THE UNDERSIGNED ARE OPPOSED TO A REZONING PROPOSAL TO ALLOW AN EXCESSIVELY HIGH TOWER AT 180 KINGSWAY / 228 - 246 EAST BROADWAY BECAUSE:

- It does not preserve Mount Pleasant's historic character. It will destroy the human-scale feeling of the area.
- It sets a precedent that will lead to more high-rise projects of this magnitude in the neighbourhood.
- It creates loading bays on Watson Street that will negatively impact pedestrians and bikes.
- It would cast long shadows on buildings and the streets to the north. The open space within the project would be shadowed by the tall buildings.
- It does not respect the City's guidelines for C-3A.
- Public and private views of the mountains would be lost.

WE REQUEST:

- That development be consistent with the current scale of the properties surrounding the "Heritage Heart" of Mount Pleasant.
- That Council consider an increase to the allowed height and density from 9.2 m (30 feet) to no more than 21.3 m (70 feet) with a high-low massing rhythm of up to a maximum 21.3 m (70 foot) tower surrounded by 2 to 4 storey buildings and an increase in the floor space ratio (FSR) from 1.00 to no more than 3.00.

BENEFITS:

- These recommendations respect the new Mount Pleasant Community Plan to increase height and density while maintaining the look and feel of the area and keeping the human-friendly scale of the buildings surrounding the Heritage Heart of our community.
- If the developer chose wood frame construction it would decrease the cost to build and thereby promote affordability. Wood frame construction is also better for the environment than concrete and glass towers.
- The form of development we are advocating will have less impact on land values, property taxes and rents in the neighbourhood, resulting in less displacement of low-income residents and small businesses.

- That Council consider an increase to the allowed height and density from 9.2 m (30 feet) to no more than 21.3 m (70 feet) with a high-low massing rhythm of up to a maximum 21.3 m (70 foot) tower surrounded by 2 to 4 storey buildings and an increase in the floor space ratio (FSR) from 1.00 to no more than 3.00.

BENEFITS:

- These recommendations respect the new Mount Pleasant Community Plan to increase height and density while maintaining the look and feel of the area and keeping the human-friendly scale of the buildings surrounding the Heritage Heart of our community.
- If the developer chose wood frame construction it would decrease the cost to build and thereby promote affordability. Wood frame construction is also better for the environment than concrete and glass towers.
- The form of development we are advocating will have less impact on land values, property taxes and rents in the neighbourhood, resulting in less displacement of low-income residents and small businesses.

Residents Association Mount Pleasant

WE THE UNDERSIGNED ARE OPPOSED TO A REZONING PROPOSAL TO ALLOW AN EXCESSIVELY HIGH TOWER AT 180 KINGSWAY / 228 - 246 EAST BROADWAY BECAUSE:

- It does not preserve Mount Pleasant's historic character. It will destroy the human-scale feeling of the area.
- It sets a precedent that will lead to more high-rise projects of this magnitude in the neighbourhood.
- It creates loading bays on Watson Street that will negatively impact pedestrians and bikes.
- It would cast long shadows on buildings and the streets to the north. The open space within the project would be shadowed by the tall buildings.
- It does not respect the City's guidelines for C-3A. • Public and private views of the mountains would be lost.

WE REQUEST:

- That development be consistent with the current scale of the properties surrounding the "Heritage Heart" of Mount Pleasant.
- That Council consider an increase to the allowed height and density from 9.2 m (30 feet) to no more than 21.3 m (70 feet) with a high-low massing rhythm of up to a maximum 21.3 m (70 foot) tower surrounded by 2 to 4 storey buildings and an increase in the floor space ratio (FSR) from 1.00 to no more than 3.00.

- These recommendations respect the new Mount Pleasant Community Plan to increase height and density while maintaining the look and feel of the area and keeping the human-friendly scale of the buildings surrounding the Heritage Heart of our community.
- If the developer chose wood frame construction it would decrease the cost to build and thereby promote affordability. Wood frame construction is also better for the environment than concrete and glass towers.
- The form of development we are advocating will have less impact on land values, property taxes and rents in the neighbourhood, resulting in less displacement of low-income residents and small businesses.

Residents Association Mount Pleasant

WE THE UNDERSIGNED ARE OPPOSED TO A REZONING PROPOSAL TO ALLOW AN EXCESSIVELY HIGH TOWER AT 180 KINGSWAY / 228 - 246 EAST BROADWAY BECAUSE:

- It does not preserve Mount Pleasant's historic character. It will destroy the human-scale feeling of the area.
- It sets a precedent that will lead to more high-rise projects of this magnitude in the neighbourhood.
- It creates loading bays on Watson Street that will negatively impact pedestrians and bikes.
- It would cast long shadows on buildings and the streets to the north. The open space within the project would be shadowed by the tall buildings.
- It does not respect the City's guidelines for C-3A. • Public and private views of the mountains would be lost.

WE REQUEST:

- That development be consistent with the current scale of the properties surrounding the "Heritage Heart" of Mount Pleasant.
- That Council consider an increase to the allowed height and density from 9.2 m (30 feet) to no more than 21.3 m (70 feet) with a high-low massing rhythm of up to a maximum 21.3 m (70 foot) tower surrounded by 2 to 4 storey buildings and an increase in the floor space ratio (FSR) from 1.00 to no more than 3.00.

BENEFITS:

- These recommendations respect the new Mount Pleasant Community Plan to increase height and density while maintaining the look and feel of the area and keeping the human-friendly scale of the buildings surrounding the Heritage Heart of our community.
- If the developer chose wood frame construction it would decrease the cost to build and thereby promote affordability. Wood frame construction is also better for the environment than concrete and glass towers.

Residents Association Mount Pleasant

WE THE UNDERSIGNED ARE OPPOSED TO A REZONING PROPOSAL TO ALLOW AN EXCESSIVELY HIGH TOWER AT 180 KINGSWAY / 228 - 246 EAST BROADWAY BECAUSE:

- It does not preserve Mount Pleasant's historic character. It will destroy the human-scale feeling of the area.
- It sets a precedent that will lead to more high-rise projects of this magnitude in the neighbourhood.
- It creates loading bays on Watson Street that will negatively impact pedestrians and bikes.
- It would cast long shadows on buildings and the streets to the north. The open space within the project would be shadowed by the tall buildings.
- It does not respect the City's guidelines for C-3A. • Public and private views of the mountains would be lost.

WE REQUEST:

- That development be consistent with the current scale of the properties surrounding the "Heritage Heart" of Mount Pleasant.
- That Council consider an increase to the allowed height and density from 9.2 m (30 feet) to no more than 21.3 m (70 feet) with a high-low massing rhythm of up to a maximum 21.3 m (70 foot) tower surrounded by 2 to 4 storey buildings and an increase in the floor space ratio (FSR) from 1.00 to no more than 3.00.

BENEFITS:

- These recommendations respect the new Mount Pleasant Community Plan to increase height and density while maintaining the look and feel of the area and keeping the human-friendly scale of the buildings surrounding the Heritage Heart of our community.
- If the developer chose wood frame construction it would decrease the cost to build and thereby promote affordability. Wood frame construction is also better for the environment than concrete and glass towers.
- The form of development we are advocating will have less impact on land values, property taxes and rents in the neighbourhood, resulting in less displacement of low-income residents and small businesses.

WE REQUEST:

- That development be consistent with the current scale of the properties surrounding the "Heritage Heart" of Mount Pleasant.
- That Council consider an increase to the allowed height and density from 9.2 m (30 feet) to no more than 21.3 m (70 feet) with a high-low massing rhythm of up to a maximum 21.3 m (70 foot) tower surrounded by 2 to 4 storey buildings and an increase in the floor space ratio (FSR) from 1.00 to no more than 3.00.

BENEFITS:

- These recommendations respect the new Mount Pleasant Community Plan to increase height and density while maintaining the look and feel of the area and keeping the human-friendly scale of the buildings surrounding the Heritage Heart of our community.
- If the developer chose wood frame construction it would decrease the cost to build and thereby promote affordability. Wood frame construction is also better for the environment than concrete and glass towers.
- The form of development we are advocating will have less impact on land values, property taxes and rents in the neighbourhood, resulting in less displacement of low-income residents and small businesses.

Residents Association Mount Pleasant

WE THE UNDERSIGNED ARE OPPOSED TO A REZONING PROPOSAL TO ALLOW AN EXCESSIVELY HIGH TOWER AT 180 KINGSWAY / 228 - 246 EAST BROADWAY BECAUSE:

- It does not preserve Mount Pleasant's historic character. It will destroy the human-scale feeling of the area.
- It sets a precedent that will lead to more high-rise projects of this magnitude in the neighbourhood.
- It creates loading bays on Watson Street that will negatively impact pedestrians and bikes.
- It would cast long shadows on buildings and the streets to the north. The open space within the project would be shadowed by the tall buildings.
- It does not respect the City's guidelines for C-3A. • Public and private views of the mountains would be lost.

WE REQUEST:

- That development be consistent with the current scale of the properties surrounding the "Heritage Heart" of Mount Pleasant.
- That Council consider an increase to the allowed height and density from 9.2 m (30 feet) to no more than 21.3 m (70 feet) with a high-low massing rhythm of up to a maximum 21.3 m (70 foot) tower surrounded by 2 to 4 storey buildings and an increase in the floor space ratio (FSR) from 1.00 to no more than 3.00.
