Farhad my son who is heavily invested in cameras came over yesterday and I explained what the proposed condo development would mean sacrificing the trees on the North border. He climbed the excavated dirt pile, of the home being built on my North side, to take some more creditable pictures than I can provide.

It is Andrew who had a great friendship with the previous owner of 5761 St. George, Bill Ward. He had inherited the house from his family and that house was built at the same time as the house that was the Cemetary managers' home and lived in it prior to the 1919 Section of the Cemetery being created.

I would mention how much sound dampening and nesting area for song birds this last stand of large trees provides for songbirds and Flickas this green space provides, it's the only span of large trees in four city blocks that doesn't face a major road.

5/14/2012

The only stand of large trees not facing a city stree left in a four block radioust, vial green space habitat.

Yes I too noticed the spelling mistakes in the picture that I think because it is 8:15 a.m. that you may be yet to open your weekend email So perhaps there is a chance to substitute this google view of the trees. Jean

I wouldn't use that first pic with all the spelling mistakes I sent you yesterday, use this one instead...

Love Moi

Last Stand of large trees not directly facing a city street

Inner city garden space, adding critical sustainability for a much larger area by providing bee keeping for polination, frut trees, vegetable gardens and flower beds on the largest scale within five city blocks.
