How does "shadow criteria" play in the Phase 2 or Phase 3 Plan? Our family lives in a house immediately on the East side, just across the back lane, from the proposed development. With a height of 95 ft, the proposed building will cast a shadow on our yard between 2 to 3 pm in Summer, according to my estimate. Basically, we will not be able to enjoy any sunshine in the summer time if we were to stay in this property, as most family activities take place in the afternoon or evening.

What will you think if you were in our situation?
