Our proposed development is consistent with the Marpole Community Plans guidelines and suggested massing. It consists of an 8 storey midrise with a commercial ground floor, second level office and residential upper floors.

Along Oak Street there is a 22'-0" public realm setback at grade, an 8'-0" setback at the lower residential floors, and an additional 8'-0" setback at the top two storeys per the guidelines. Along W. 67th Avenue there is a 22'-0" public realm setback at grade, a 5'-0" setback at the lower residential floors, and an additional 8'-0" setback at the top two storeys per the guidelines. Along the lane there is an 12'-0" setback at grade, an 8'-0" setback at the lower residential floors, and an additional 6'-0" setback at the top two storeys per the guidelines. Along the adjacent property there is a 6'-0" setback at grade, and an additional 11'-0" setback at the residential floors that satisfies the guidelines.

At grade, commercial spaces front Oak Street with a small plaza on the corner of Oak Street and W. 67th Avenue to compliment the plaza on the adjacent property across Oak Street. The office lobby is accessed off Oak Street. The residential lobby is set along the quieter W. 67th Avenue. Along the lane, there are two townhouses setback to allow for landscaped front yards. The entry to the parkade is located off of the lane on the north side of the property to move it as far from W. 67th Avenue as possible. The loading bays are located next to the parkade entry with access from the lane.

The proposed uses at grade are approximately 6,000 sf of commercial space, a residential lobby, townhouses, and service spaces. The total area of the ground floor level is 9,004 sf. On the second floor, there is approximately 8,700 sf of office space. The residential floors consist of a mix of 1 bedroom, 2 bedroom, and 3 bedroom units that is consistent with the guidelines. There are a total of 62 units in the development. Every residential unit has a patio, and the three penthouse units have private rooftop patio with access from within their unit.

The building area is 64,095 sf achieving an FSR of 3.52. As per the Marpole Community Plan, a minimum of 0.5 FSR of office space is provided at level two, so additional density beyond 3.0 FSR is requested to achieve this. The total building height is 104'-0".

The site sits on the corner of Oak Street and W. 67th Avenue. The area of the site is 18,207sf.

The form is extruded to the maximum 8 storeys per the Marpole Community Plan.

The form is then setback per the Marpole Community Plan. It is setback 6'-0" from the North, 22'-0" from the East, 6'-11" from the South, and 12'-0" from the West.

The lower levels step back per the Marpole Community Plan. They step back 0'-0" from the North, 8'-0" from the East, 5'-0" from the South, and 8'-0" from the West.

The upper two levels step back per the Marpole Community Plan. They step back 11'-0" from the North, 8'-0" from the East, 8'-0" from the South, and 6'-0" from the West.

The form is further articulated to distinguish the commercial spaces from the residential spaces. A rooftop amenity is added for the residents.

LOW EMISSIONS GREEN BUILDINGS - RESIDENTIAL

PERFORMANCE LIMITS

*CoV Energy Modelling Guidelines

We will meet minimum performance limits set by the CoV:

Table B.1.2b: Performance Limits- Buildings Connected to a City-Recognized Low Carbon Energy System

Residential High-Rise (7+storeys) TEUI (Total Energy Use Intensity) = 130 kWh/m ² TEDI (Thermal Energy Demand Intensity) = 40 kWh/m ² GHGI (Greenhouse Gas Intensity) = 6 kgCO ₂ /m ²
--

WHOLE BUILDING AIRTIGHTNESS

*Illustrated Guide to Achieving Airtight Buildings (2017)

Whole-building airtightness will be tested and reported complying with the following:

- Air leakage target of 2.0 L/s*m² @75 Pa
- Suite-level air-leakage target of 1.2 L/s*m² @50 Pa
- Airtightness testing on 10% of the first 100 units and 5% of all units above that

All testing conducted will be according to ASTM E779 or to an equivalent standard acceptable to the Chief Building Official.

ENHANCED COMMISSIONING

*ASHRAE Guideline 0-2005 and 1.1-2007 or an alternate commissioning standard

We will provide an enhanced commissioning consisting on:

- Commissioning Plan
- Commissioning Report

ENERGY SYSTEM SUB-METERING

We will provide:

- Separate master metering for each energy utility
- Sub-metering of all major energy end-uses and major space uses

ENERGY REPORTING

Our proposal will meet the following:

- Energy Star Portfolio Manager account with basic property information, including setup of meters for all energy utilities servicing the building.
- Agreement with the CoV to report energy use data for the building as a whole and certain common areas and building systems.

REFRIGERANT EMISSIONS

*Code

We will calculate and report life-cycle equivalent annual carbon dioxide emissions in kgCO₂e/m² from the emission of refrigerants.

EMBODIED EMISSIONS

Report the life-cycle equivalent carbon dioxide emissions (global warming potential impact, or "embodied carbon") in kgCO₂e/m², as calculated by a whole-building life cycle assessment LCA.

We will submit a report with:

- Embodied emissions intensity in kgCO₂e/m²
- Total lifecycle embodied emissions in kgCO₂e/m²
- Equivalent annual embodied emissions intensity in kgCO₂e/m²/year

For information only, impacts and benefits beyond the system boundary (reuse, recycling and energy recovering from flows exiting the system boundary) will be reported.

VERIFIED DIRECT VENTILATION

Our building will be:

- Constructed with a ventilation system that provides outdoor air directly to all occupiable spaces (quantities by code).
- Designed with flow rates to be tested and verified (commissioning process).

LOW EMITTING MATERIALS

On our proposal the materials containing VOCs (volatile organic compounds) or added urea formaldehyde will be minimized by meeting the content requirements of Green Seal, Green Label, Green Label Plus, FloorScore, South Coast Air Quality Management District Rules.

INDOOR AIR QUALITY TESTING

We will do testing for: formaldehyde, particulates, ozone, total VOCs and carbon monoxide
The test will be prior to occupancy and reported to the CoV.

INTEGRATED RAINWATER MANAGEMENT AND GREEN INFRASTRUCTURE

*City-Wide Integrated Rainwater Management Plan

We will implement a management of the site's rainfall through integrated management and Green Infrastructure (GI) through:

Vision, Principles and Actions:

- Return first 24mm of rainwater/day into natural pathways or evapotranspiration
- Treat the next 24mm of rainwater/day to remove pollutants
- Convey safely rainwater from storm events over 48mm per day
- Highlights biodiversity demonstration projects using green rainwater infrastructure

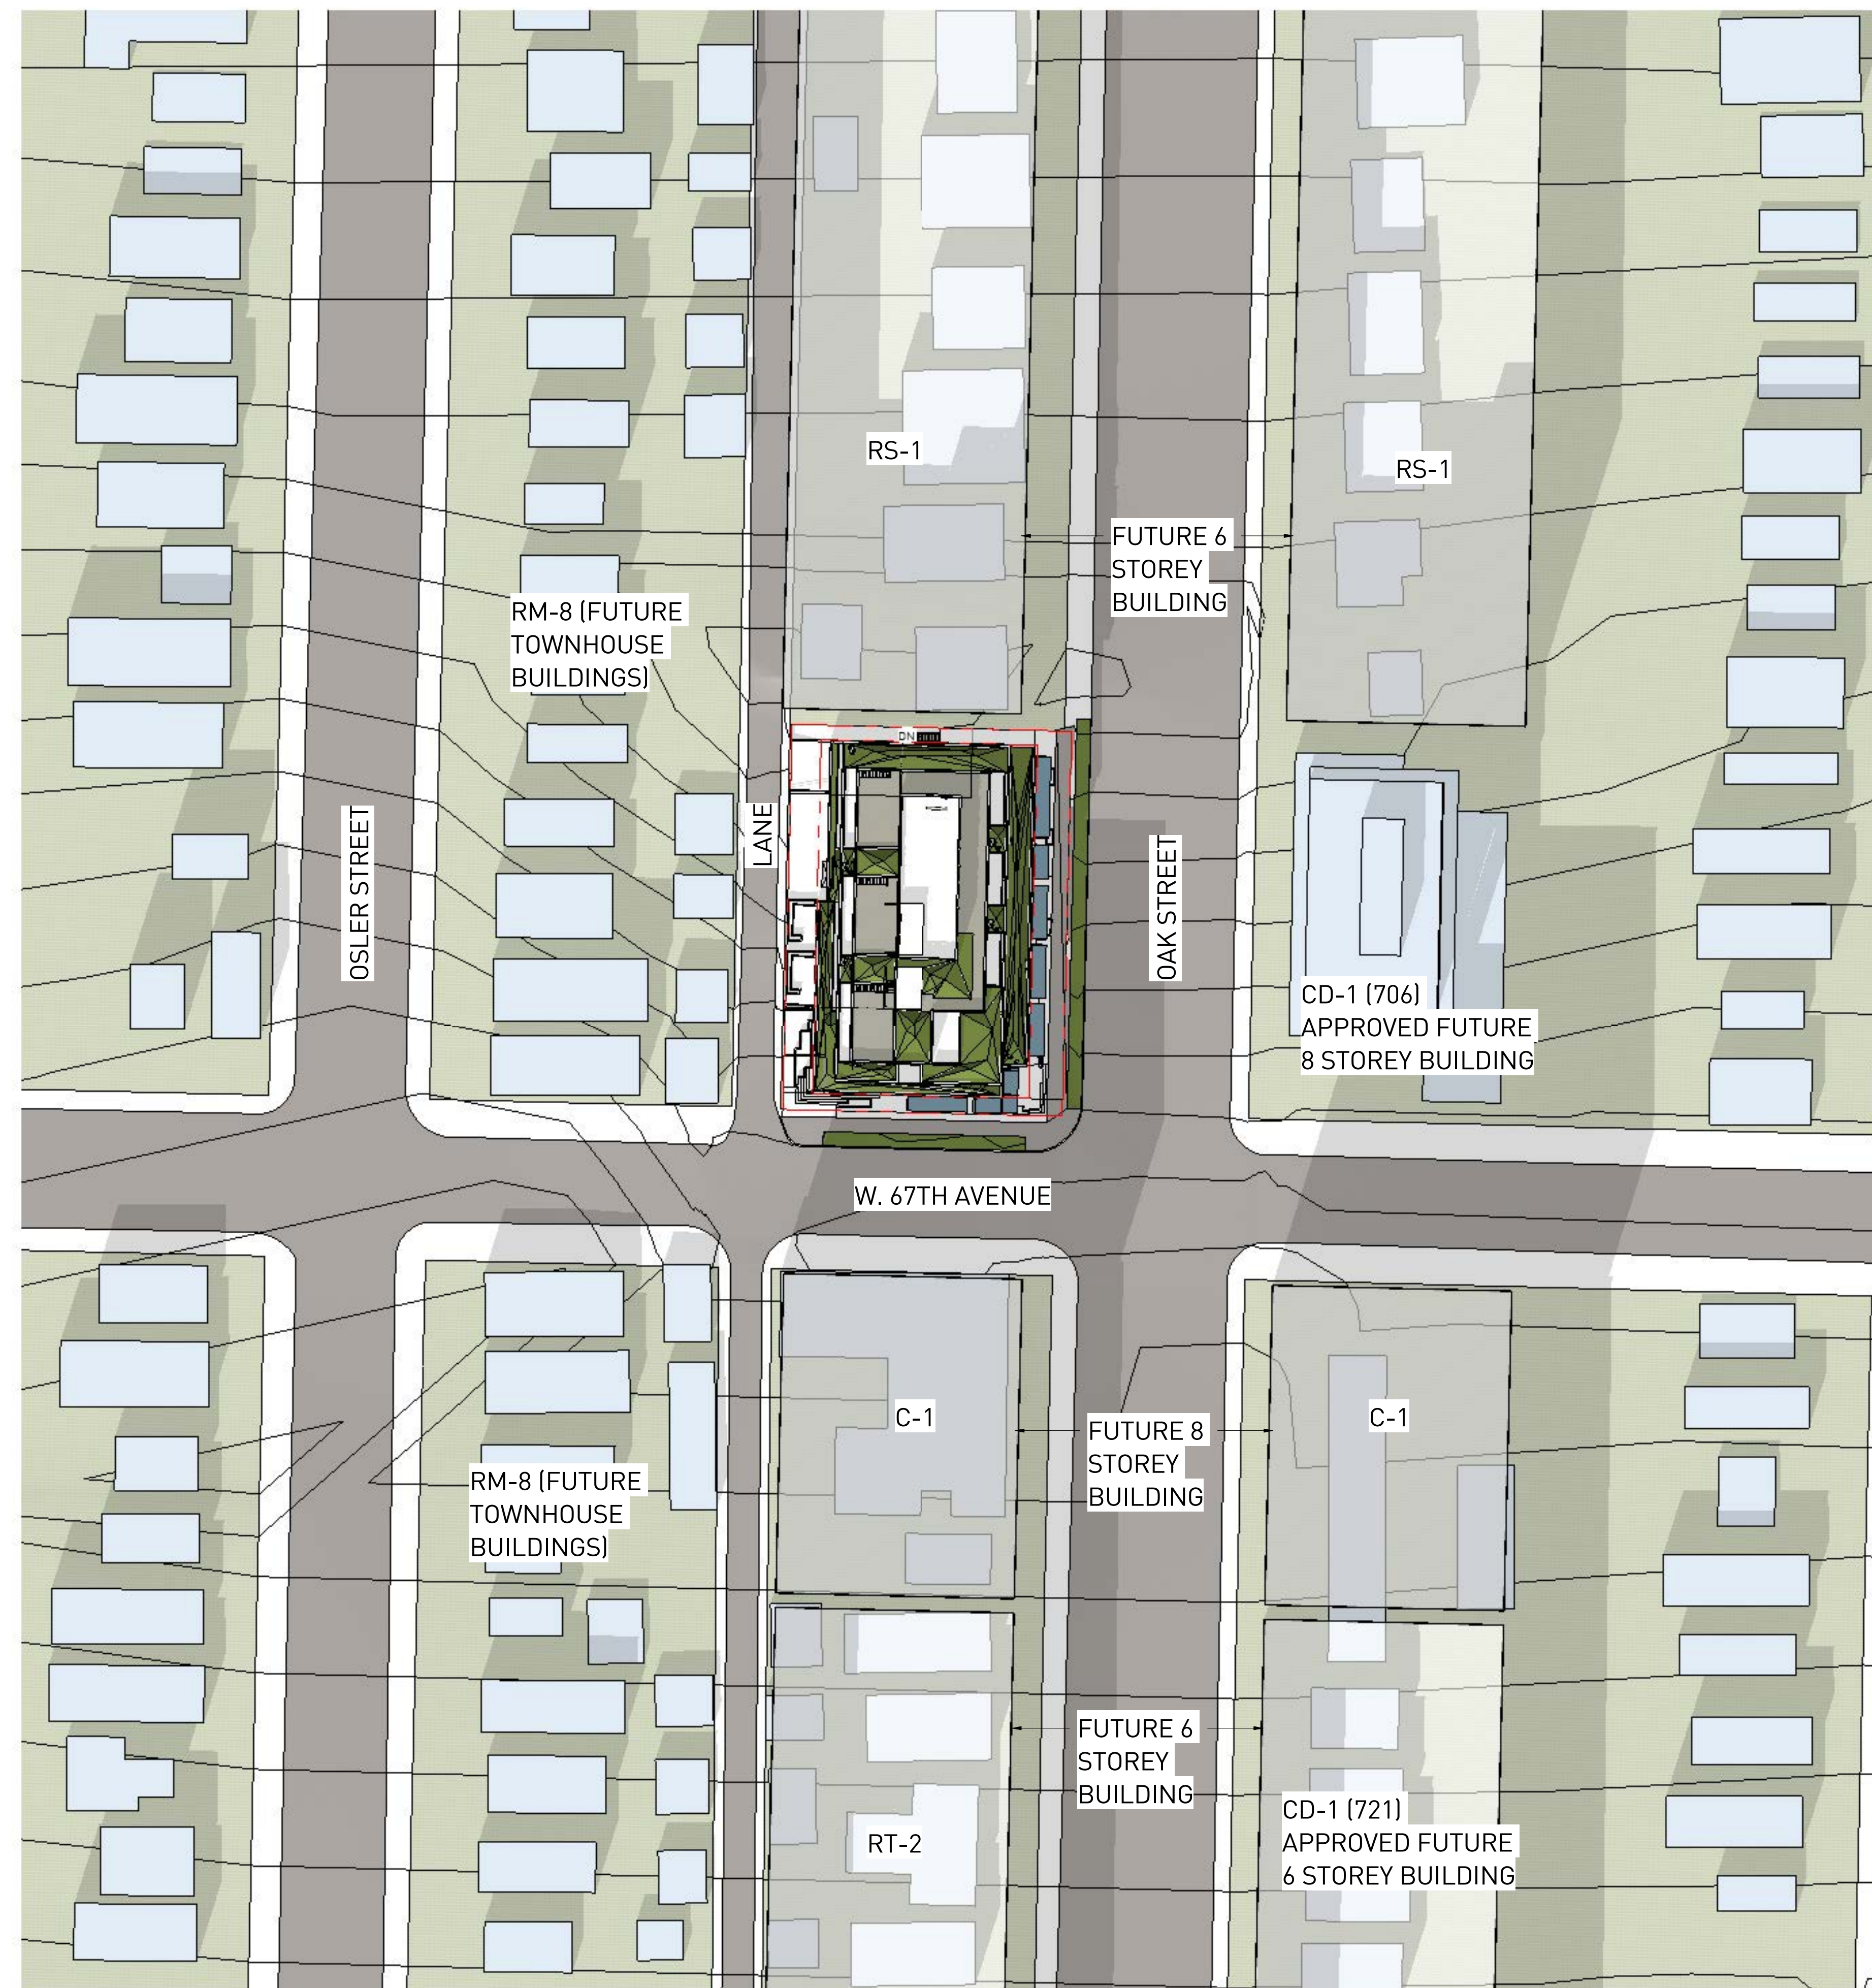

Best management Practice Toolkit:

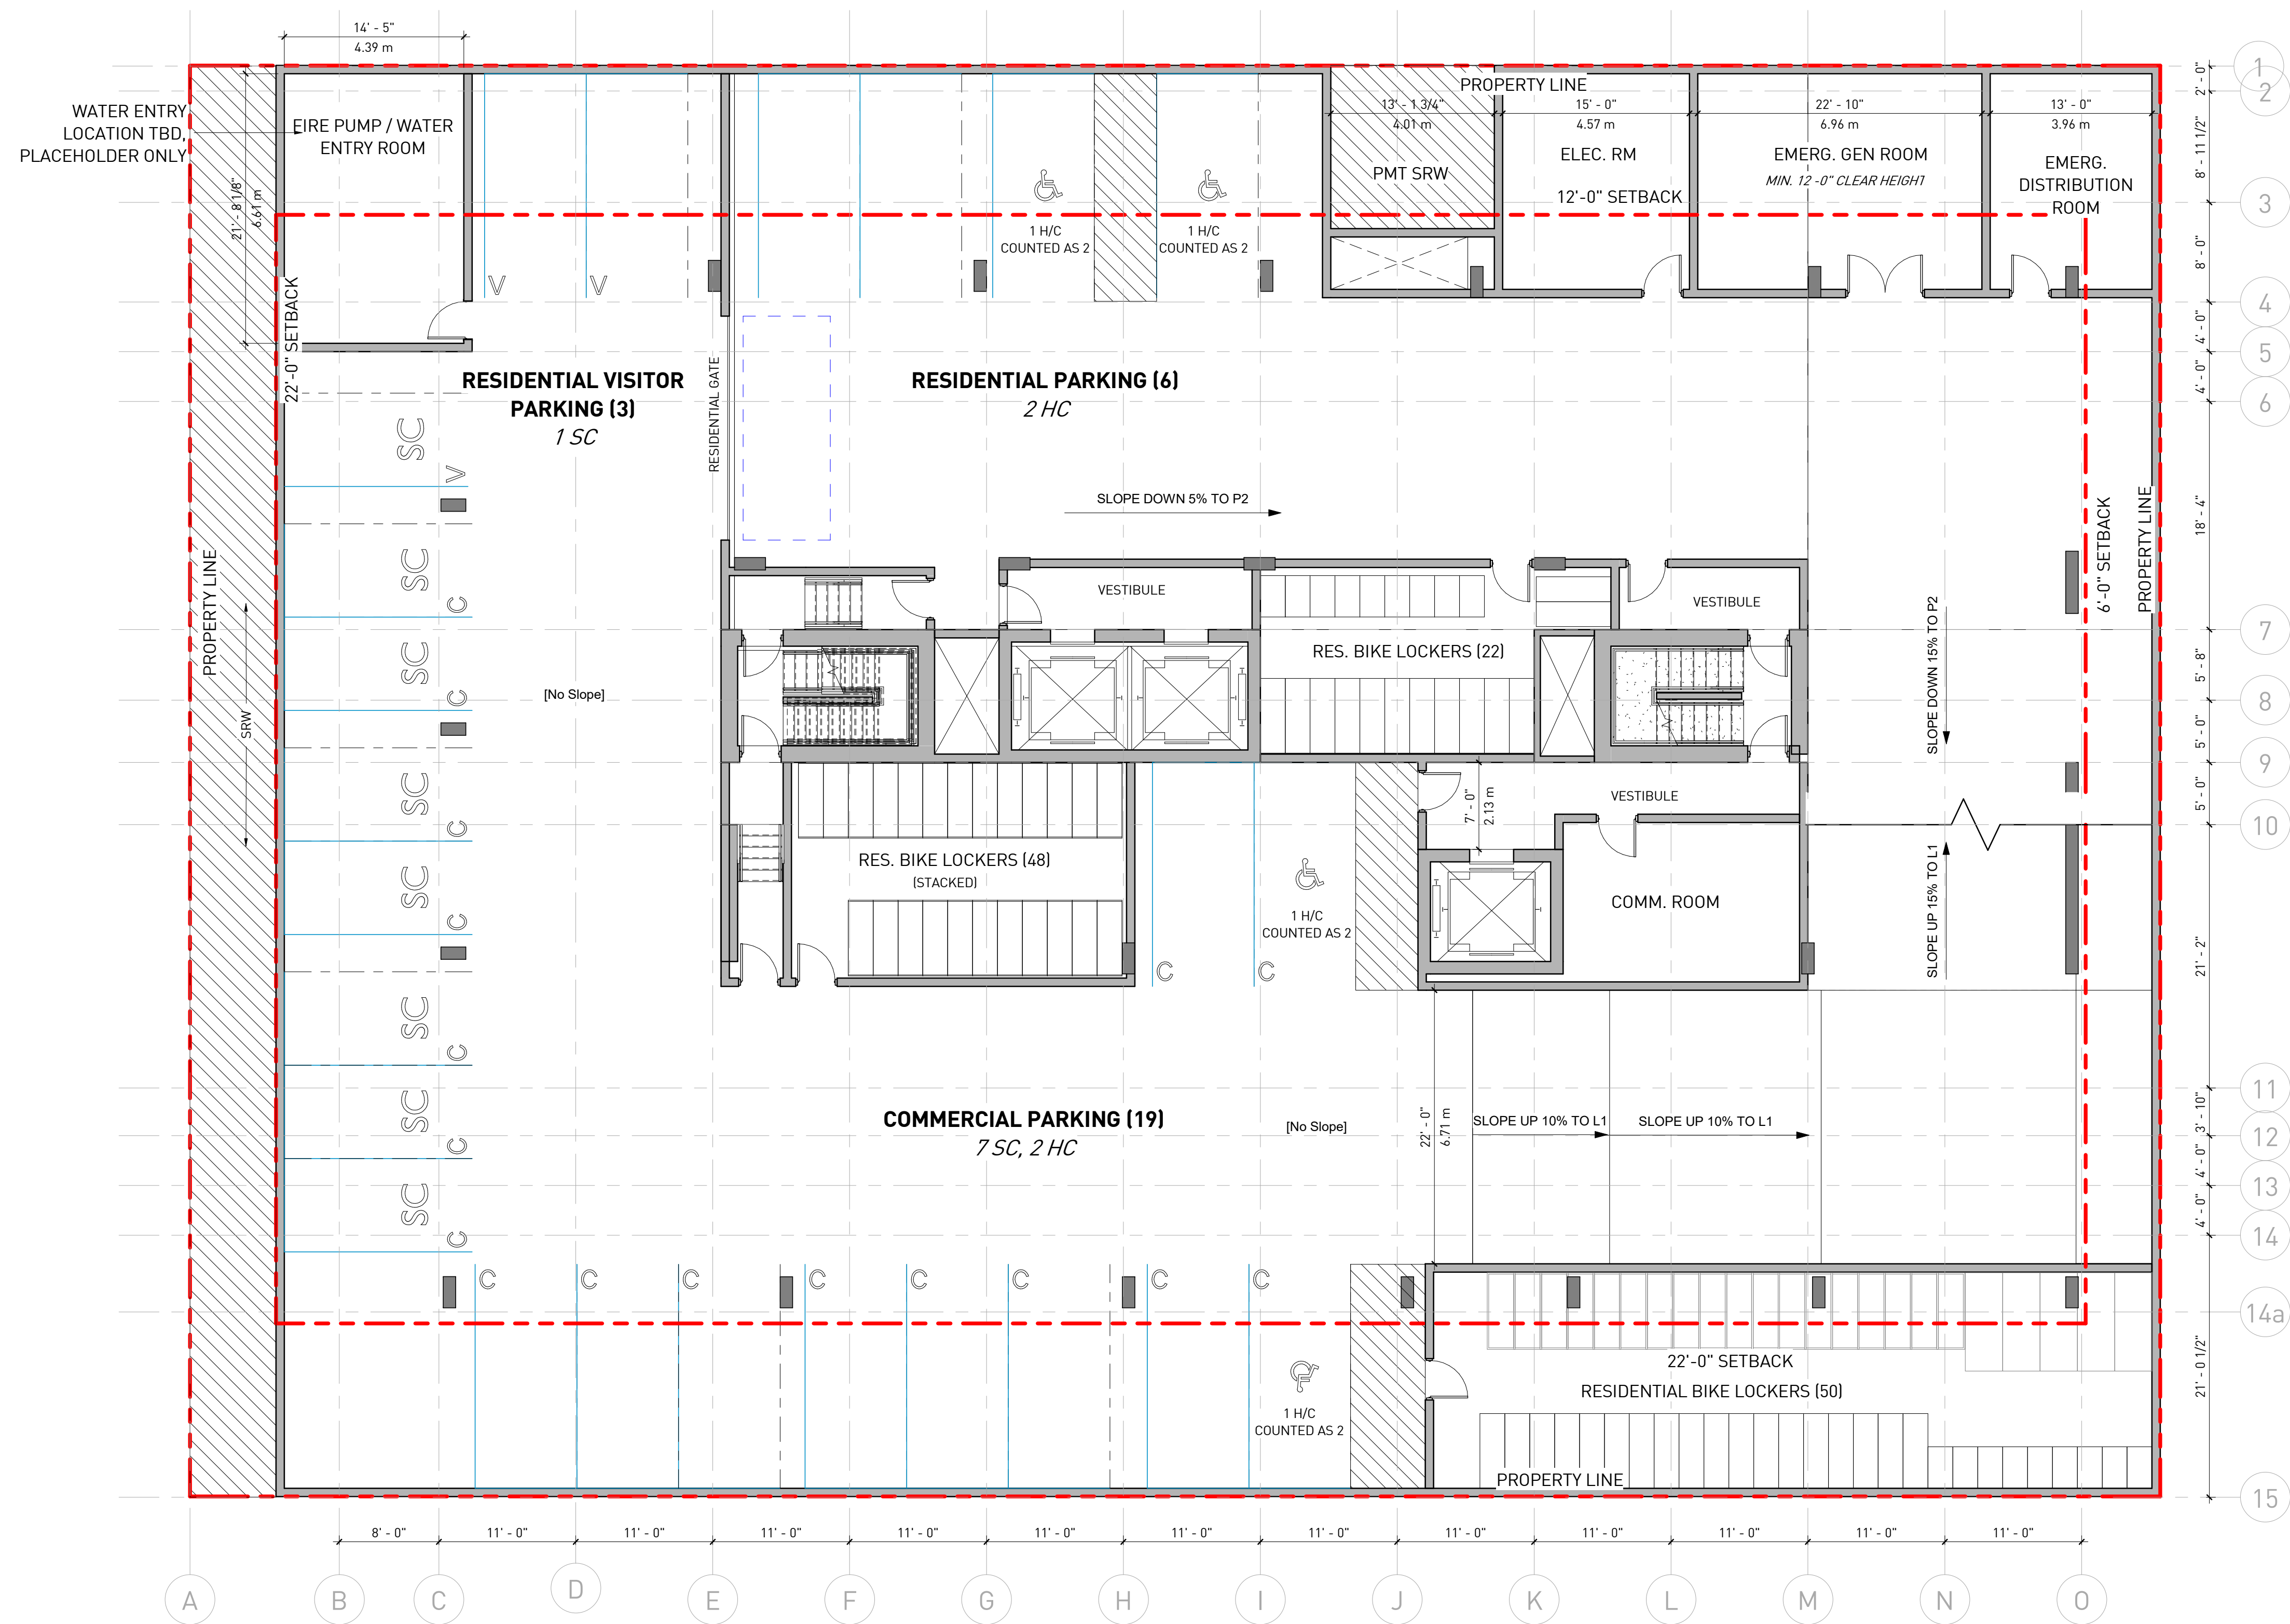

Grey and green infrastructure measures (CoV website).

RESILIENT DRINKING WATER ACCESS

We will provide a potable water access point capable of operating on city water pressure alone and without electricity to be located on a lower floor.
There will be one fixture every 75 occupants.
