

Swings - 2-belt swings and 2- molded high back swings. The molded high back swings allow children with low muscle tone to enjoy the thrill of soaring into the air.

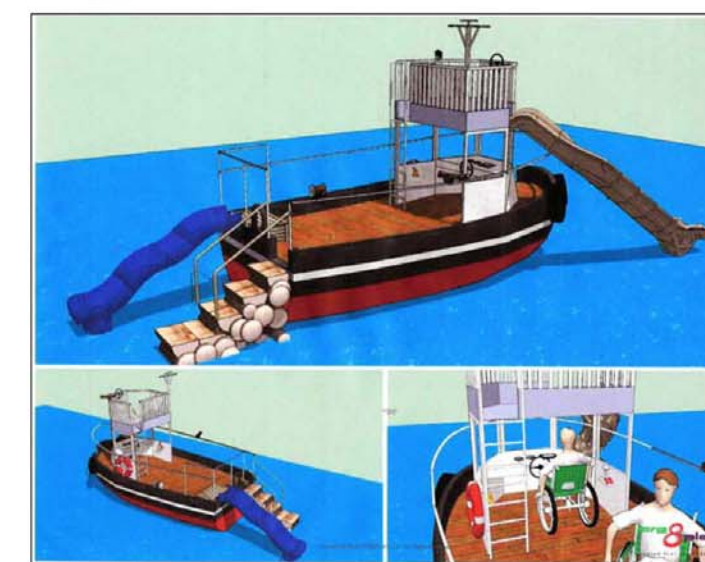

Community Art - The walls of the raised sensory garden as well as the center of central sensory garden in the plaza are opportunities for community or children's art.

Rotating Climber - allows multiple children to gather, cooperate, climb, spin, push and pull. The bottom of the rotating climber is solid which will allow a child with low muscle tone or other disabilities to enter the climber and lay or sit on the bottom while experiencing the spinning sensation.

Wooden Tree House, accessible - by local artist provides imaginative fun, with natural materials to include slide and climber as well as bench and counter.

Boat/Sand/Water Experience, accessible - This small boat will include a steering wheel, talk tubes to communicate with the tree house and texture provided by barnacles, starfish, shells and pebbles. A small trickle of water will be activated by a button on a timer and will flow around the back of the boat overflowing into the sand creating the perfect sensory experience. A cooperative opportunity is provided as the children in the sand cooperate with the children inside the boat to keep the water flowing.
